Election/Restrictions

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Restriction to one of the following inventions is required under 35 U.S.C.

121:

- I. Claims 1-20, drawn to a transfective liquid crystal display, classified in class 349, subclass 113.
- II. Claims 21-28, drawn to method of making a color filter, classified in class 438, subclass 70.

Inventions I and II are related as process of making and product made.

The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case photolithography techniques are not the only method of making a color filter. Silk screening is another method used to make color filters.

The inventions are distinct, each from the other because of the following reasons:

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
